

## COVID-19 | Disinfecting Newco Machines

For updated information on the coronavirus please check the CDC and WHO websites.

Beverage equipment, water coolers and dispensers are common touch areas for personnel within the work environment.

In order to help prevent the spread of the coronavirus disease (COVID-19), here are some helpful tips to keep Newco machines clean and disinfected.

- 1.) Wear gloves while cleaning and disinfecting beverage machines.
- 2.) If machine appears dirty, clean exterior with a damp towel that has a mild detergent or soap and water first before disinfecting. Avoid dripping by using less liquid on the cloth. (DO NOT use detergent/soap solution on touch screens).
- 3.) Disinfect using products from the EPA List N: Disinfectants for Use Against SARS-CoV-2. Some examples are Clorox Disinfecting Wipes, Lysol® Disinfectant Spray, and PURELL Professional Surface Disinfectant Wipes.
- 4.) In order for disinfectant products to be effective follow the instructions. The recommended contact time for disinfectants varies anywhere between 30 seconds to 10 minutes. Wiping them to soon might not disinfect the surface.
- 5.) Disinfect frequently touched surfaces. This includes buttons, touch screens, brew baskets and carafe handles.
- 6.) If disinfecting touch screens, please use alcohol wipes that are at least 70% alcohol. If using a spray do not spray directly on the touch screen but dampen a soft cloth and use that to wipe the touch screen. Avoid dripping by using less liquid on the cloth. DO NOT use Bleach, it can damage sensitive components and coatings.
